

Product Benefits

- Easy to install with no messy cleanup.
- Absolutely no stone required.
- Lightweight chambers can be hand carried to trench.
- Fast installation saves time and money.
- Infiltrator chambers have a 12-year success rate of 99.5%.
- Greater infiltrative capacity means added protection and peace of mind.

Chamber Size (W x L x H) 22" x 101" x 13½"

Equalizer 36 Nominal Chamber Specifications
Chamber Size (W x L x H) 34" x 75" x 12"

AdvanTex[™] Treatment Systems.

Our patented AdvanTex[™] Treatment System works just like a recirculating packed bed filter – a proven technology. But the AdvanTex[™] Treatment System used a highly efficient, non-woven textile material, instead of sand or gravel, for the treatment media.

AdvanTex[™] textile treatment systems produce effluent that exceeds "secondary" treatment standards. And because textile can handle much higher loading rates than sand or gravel media, textile filters are very compact units. So they cost less for single-family installations, require significantly less land area, and are easier to install than other packed bed filters.
